## DETAILED ACTION

### *Information Disclosure Statement*

1. The information disclosure statement filed 9/24/2002 has been considered and placed in the application file.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 7, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Leon et al. (5,728,068). Leon et al. disclose a system for performing a medical treatment in a blood vessel the system comprising all the limitations as claimed (figs. 1-9).

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leone et al. (5,728,068) in view of Imran (5,833,650). Leone et al. disclose all the limitation of the claims except for a presence of a sheath/tube and a suction source communicating with the interior of the sheath/tube as claimed. Imran disclose a

Art Unit: 3731

sheath/tube and a suction source communicating with the interior of the sheath/tube as claimed. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a sheath and a suction source communicating with the interior of the sheath into the Leone et al.'s system in order to provide an apparatus reversing the flow of blood in an occluded vessel for delivering the system to the desired site.

In regarding to claims 5 and 8, although, Leone et al. do not disclose the balloon carrying a stent being made from a low compliance material, attention is directed to the Imran reference which discloses the balloon carrying a stent being made from a non compliance material (col. 6, lines 32-50). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to make the Leone et al.' balloon from a non compliance material in order to prevent rupturing the vessel.
